COMPANY OVERVIEW

Excellence Nessuah engage in managing assets over the short and long term, as well as a range of financial services.

SUMMARY

Genady Grinberg, CISO:

NexFuzz has detected vulnerabilities that were previously missed by our other tools and more importantly, our manual testing.

The integration into the SDLC provides full automation, enhancing DevSecOps and has so far delivered an immediate ROI.

THE CHALLENGE

- Finding complex and hard to detect issues in the application flow
- Automate testing for OWASP Top 10 and similar issues
- Integrate into an SDLC pipe to achieve DevSecOps
- Produce actionable results without false positives

THE SOLUTION

NexFuzz SDLC integration features worked flawlessly, the process was automated from code writing to pre-production testing while finding complex issues without human interaction

IMPACT ON THE BUSINESS

- ROI with regards to smaller security needs, eliminating manual testing or diminishing their scale.
 - Producing actionable and retestable results allow better flow for developers and make development time decrease.
 - Finding unknown vulnerabilities in the system before it hits production saving costs and improving company status as a market leader.
-
