NexPloit CLIENT CASE STUDY

Herjavec Group Improves Application Security with Greater Speed & at Lower Cost with NexPloit

HERJAVEC GROUP

COMPANY NAME
The Herjavec Group

INDUSTRY
Educational technology

SIZE
>300 Employees

LOCATION
Canada & USA

COMPANY OVERVIEW
Dynamic IT entrepreneur Robert Herjavec founded Herjavec Group in 2003 to provide cybersecurity products and services to enterprise organizations.

We have been recognized as one of the world's most innovative cybersecurity operations leaders, and excel in complex, multi-technology environments.

SUMMARY

Herjavec Group offers expertise in comprehensive security services including Managed Security Services (SOC Operations, Threat Detection, Security Technology Engineering) & Professional Services (Advisory Services, Identity Services, Technology Implementation, Threat Management & Incident Response). Herjavec Group has offices and Security Operations Centers across the United States, United Kingdom, and Canada.

THE CHALLENGE

- Herjavec Group offers a broad range of sites and applications that need to be tested for vulnerabilities and made secure

- Manual penetration testing was not comprehensive, provided irregular coverage of the applications and was very costly

- As more applications and sites were developed and deployed it became impossible to keep up with required tests and making sure applications are tested and secure

THE SOLUTION

Deploy NexPloit across our various platforms and utilize it to conduct comprehensive automated vulnerability tests of our websites, applications and APIs. By deploying NexPloit we gained significant efficiencies in our application testing processes and the automated tests provide comprehensive and predictable vulnerability coverage. In addition to the broad set of payloads provided by the DAST solution, we also have the ability to utilize the Fuzzer to detect unknown vulnerabilities and 0day vulnerabilities so we can remediate them and help improve the security of our applications and sites. Over time we plan to integrate NexPloit into our SDLC to ensure scans are automated as part of our CI/CD and issues are detected and remediated even faster.

IMPACT ON THE BUSINESS

NexPloit enabled us to significantly improve our application security coverage and remediate vulnerabilities much faster. Nexploit has reduced the amount of wall clock hours AND man hours we used to spend doing preliminary scans on applications by about 70%.
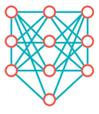

"We're ecstatic to partner with NeuraLegion. The NexPloit technology was simple to deploy and integrate into our customer engagements and began showing immediate value. Nexploit has reduced the amount of wall clock hours AND man hours we used to spend doing preliminary scans on applications by about 70%. If you're doing appsec, and doing a lot of it, you need to look at NexPloit."

Bobby Kuzma, CISSP Practice Director, Security Assessment & Testing Herjavec Group.
