COMPANY OVERVIEW

Encyclopaedia Britannica, Inc. is the world-wide leader at the forefront of the information revolution for over 250 years. Britannica has empowered the way the world teaches and learns, and continues to pave the way in reimagining discovery and inquiry. **Inspiring curiosity and instilling the joy of learning** is how Britannica builds the world's future leaders.

SUMMARY

Encyclopaedia Britannica, Inc. is a global knowledge leader. A pioneer in digital learning since the 1980s, the company today serves the needs of students, educators, lifelong learners, and professionals by providing curriculum products, language-study courses, digital encyclopedias, and professional readiness training through its extensive products.

Britannica has continued to redefine information discovery within the tech and education sectors, serving 83 countries, 16 languages, and 150 million students world-wide. The company's mission to inspire curiosity and the joy of learning has earned it the ranking of the #1 Company to Watch in the EdTech Digest's State of the EdTech report for 2019-2020. It is headquartered in Chicago, IL, USA.

THE CHALLENGE

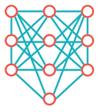

- Britannica offers a range of applications across a number of platforms
- Consolidate the use of several security testing tools
- Validate our security for OWASP Top 10 vulnerabilities
- Integration into our SDLC
- Reduce manual security testing costs

THE SOLUTION

Deploy NexPloit across our various platforms and integrate it into our SDLC so we can test for vulnerabilities early and often. NexPloit automates the process of vulnerability testing and significantly reduces the cost and time spent on manual testing. In addition, the solution offers us broad coverage and was able to highlight potential vulnerabilities that were previously undetected by other automated tools. Because NexPloit validates that each vulnerability found can actually be exploited before it is reported, the reports it delivers are immediately actionable reports with significantly less false positives. The application is also fully integrated into our SDLC, coupled with no integration, providing robust security testing in a fraction of the time and cost.

IMPACT ON THE BUSINESS

NexPloit provides our DevOps and Development teams with the most comprehensive vulnerability testing solution. Using one solution instead of four, while being able to detect more, with only validated vulnerabilities, delivers us the automation and freeing up resources to work on critical initiatives.

NeuraLegion
Application Security Testing

“NeuraLegion has been a strong partner and their solutions have significantly helped us improve our security posture. Their broad detection capabilities, simple deployment and integration process and SDLC integration made this an easy decision for us to use the tool. The fact that only vulnerabilities that can actually be exploited are reported was a huge plus as we reduce alert fatigue and unnecessary noise.”

Kalyan Nathan, VP - Technology, Infrastructure & Operations,
